Sergei Baturin (Russia, Bashkortostan Republic, 453431)

Goal: Front-end developer

Skills:

Front-end

Javascript (ES6)
React, Redux
Middlewares (Saga, Thunk)
HTML / PUG
CSS / SCSS

Back-end

Node
Express
REST

Data Bases

MySQL
PostgreSQL
MongoDB

Tools

Webpack
Gulp
GIT
Docker
Linux
AWS
Heroku

Education

2019 - now Self-educated
Front-end developer

2002 - 2007 Pedagogical college
of Blagoveshchensk
Social teacher

Data Visualization

D3.js

Languages

English - Intermediate
Russian - native speaker

Pet-projects:

Let's Todo

React / Redux browser to-do list application. It is possible to offer categories. For data storage API LocalStorage is used. The project is located on Heroku. [Run app](#) [GitHub](#)

Data visualization

I use the D3.js library for plotting. What I learned, I post here. [Run app](#) [GitHub](#)

Form validation

Template for validating data in pure JS. [Run app](#) [GitHub](#)

Counter

Simple JS, React and Redux counter. [Run app](#) [GitHub](#)

Chess Knight

Chess Knight moves visualization. [Run app](#) [GitHub](#)

Projects:

2018 - 2019, I worked as a freelancer in my hometown.
Here are some projects:

Medical clinic site

It was necessary to launch the clinic website in a weekly time in accordance with the federal laws of the Russian Federation. The site is built on Wordpress and compiled completely by me. I was responsible for design, layout and hosting. [Visit a website](#)

Culture center site

Our city needed to create a site of the culture center. I was the only developer and was responsible for design, layout and server. [Visit a website](#)

Native language teacher site

Client needed to create a bilingual website taking into account national characteristics. I solved this issue through a subdomain: the JS script redirects the user from the current page to a similar one in another language. The site was created to participate in the competition of teachers of the Bashkir language. [Visit a website](#)

Entrepreneurs list site

It was a volunteer project. List of Blagoveshchensk city organizations (Bashkortostan). Back-end - PHP (MVC pattern). Front End - Materialize CSS, JS, JQuery. DB - MySQL. The project was written by me from scratch. It is a framework for hosting organizations on the network. Unfortunately, the customer no longer supports the project. Only the core of the site remains - [GitHub](#)

I have been learning JavaScript since the beginning of 2019.
Programming has captured me so much that by the end of the year I quit other activities and devoted myself entirely to learning JavaScript and React.
At the moment I'm looking for a team that will benefit from my skills and in which I will grow as a front-end developer.
